

HIGH CARBON WIRE

Galfan® technology

Galfan is now experiencing a new craze after several years of lethargy. In the field of high as well as low carbon, many wire drawers consider the advantage of such kind of product as strategic in their range of fabrication. As the patents related to Galfan are more than 20 years old, FIB can be considered as a pioneer in the supply of equipments related to the production of Galfan and the performances of our equipments have been demonstrated at a big European wire drawer's.

Having this experience, FIB has broken into the high carbon as well as the low carbon markets.

FIB is not only offering the equipments related to this technology such as tanks in cast iron having a high thermal output or ceramic tanks with immersed burners but has also developed, in the line of its developments in the field of nitrogen wiping, a system for the wiping of Galfan corresponding to the performances expected from a noble final product as galvanized wires can be.

And lastly, in the framework of a support to our customers, FIB is also offering the possibility of a training done by an FIB expert and regarding the exploitation procedures of the line.

Thinking FIB in the field of Galfan is opting for a global solution that will ensure your success.
